EDUCATION

University of California, Berkeley

August 2025–May 2029

Bachelor of Arts in Applied Mathematics & Physics, Minors in Education and Data Science

Relevant Coursework: Mechanics, E&M, Experimental Physics, Multivariable Calculus, Linear Algebra, Foundations of Data Science, Data Structures, Interdisciplinary Research

TECHNICAL PROJECTS

Full-Stack Chess Web Server - Python + JavaScript + HTML

2025–Present

- Built an end-to-end playable chess application with browser-based UI and Python back-end for move validation and game state management.
- Integrated front-end interactions (clicks, highlights, board updates) with server logic to support real-time gameplay.
- Deployed fully functional version for testing; implemented undo, move highlighting, and game reset features.
- **Github:** github.com/lisaliu060306-art

AI-Assisted Music Pipeline - Suno + Python + DAW

2025–Present

- Developed a modular pipeline to generate and post-process 10+ AI-assisted compositions using Suno and Python scripting.
- Applied signal processing techniques to optimize harmonics, dynamics, and clarity programmatically.
- Built a reproducible testing framework to iteratively refine outputs and ensure consistent quality.
- **Portfolio:** suno.com/@elizaliuartist

ENGINEERING & RESEARCH EXPERIENCE

UC Berkeley IT (Student Technology Services) | *Student Technology Consultant* | Jan 2026 - Present

- Executed advanced diagnostics on Linux, macOS, and Windows environments, resolving complex wired, wireless and VPN network protocol failures for 300+ client devices.
- Manage remote server operations, SSH key authentications, local terminal configurations, and security incident remediations including malware isolation and CalNet security protocols.
- Managed daily incident life-cycles in ServiceNow ticketing system maintaining a 98% first-touch resolution rate; trained and mentored 5 incoming technical team members.

UC Berkeley, Undergraduate Research Assistant - Undergraduate Research Apprentice Program (URAP)

January 2026 – Present

- Conducting interdisciplinary research under Professor Fulton to evaluate AI-powered educational tools, with a focus on Playlab platform.
- Investigating and comparing alternative AI education platforms to identify best-in-class features and potential gaps in existing university-supported tools.
- Sorting data bases and defining key metrics for effectiveness, usability, and pedagogical impact.

UC San Diego, COSMOS Structural Engineering Research Intern

July 2024 – August 2024

- Designed and tested 20+ wind turbine blade prototypes using CAD and aerodynamic simulation tools.
- Developed dashboards visualizing metrics for technical and non-technical audiences.
- Awarded 2nd Place & Best Presentation.

UCLA, IEMP Mechanical Engineering Research Intern

June 2023 – October 2023

- Simulated vibration damping systems using Python; developed 3D models to compare performance.
- Co-authored peer-reviewed ICCE publication and presented complex simulations to technical panels.

TECHNICAL & DESIGN EXPERIENCE

Human Judge AI Empowerment Program Remote

AI Evaluator

January 2026–Present

- Review and assess AI-generated content for accuracy, relevance, and quality, providing structured feedback that helps improve AI models.
- Participate in the 3-step evaluation process (**Activate** → **Vote** → **Voice**) to influence AI behavior and industry standards.

The Daily Californian Berkeley, CA

Illustrator

December 2025 – Present

- Produce illustrations to accompany news, features, and opinion pieces for UC Berkeley's daily newspaper weekly
- Translate article themes and tones into compelling visual narratives using digital illustration tools
- Partner with writers and editors in the ideation process, from initial sketch to final asset delivery

Berkeley Chinese Acapella Berkeley, CA

Web Designer & Developer

August 2025 – Present

- Built and maintained a custom website for student performance group, serving as primary digital presence for recruitment and audience engagement
- Collaborated directly with group leadership to align design with branding and performance schedule

Calteach Program Berkeley, CA

Teaching Assistant & Learning Tools Developer

August 2025–Present

- Developed interactive Python-based learning tools for 30+ students, improving comprehension by 25% via data-driven iteration cycles.

VCHS Physics Club San Jose, CA

Vice President & Web Developer

August 2023– May 2025

- Developed interactive physics education website (Wix + Python) for 120+ students; implemented 10+ simulations and visualizations, increasing concept comprehension by 40%.

MARKETING EXPERIENCE

Grangou, Marketing Communications Intern

January 2026 – Present

- Creating and designing static posts and graphics for social media Uphold brand standards and visual identity through consistent design execution.
- Supporting marketing campaigns with original assets tailored to target audiences.

Breefly, Marketing Intern

January 2026 – Present

- Executing targeted social media campaigns to drive user growth and boost platform visibility.
- Contributing to strategic planning and optimize content distribution to expand audience reach.

SKILLS

Programming Languages: JavaScript, TypeScript, HTML5/CSS3, Python, Java, R, SQL, MATLAB

Frameworks & Libraries: React.js, Node.js, Flask, Tailwind CSS, Pandas, NumPy, OpenAI API

Tools & Software: Git, GitHub, Figma, Illustrator, Procreate, Chrome DevTools, Excel, Logic Pro, CAD

Core Competencies: Component-Based Architecture, Responsive Web Design, Client-Side State Management, RESTful API Integration, UI/UX Prototyping, Full-Stack Development, Data Analysis

PUBLICATION

Q. Liu, R. Shi, and L. Lu, "Existing Vibration Control Techniques Applied in Construction and Mechanical Engineering," in *Proc. ICCE*, 2023.
